PROFILE

I'm an AI & ML undergraduate who genuinely enjoys building things end-to-end — from designing clean frontends to connecting APIs, databases, and deployment pipelines. Most of my time goes into experimenting with full-stack projects using React, Supabase, Firebase, Vercel, and Render, while also using AI coding tools like Cursor, Windsurf, Ollama, ChatGPT, and GitHub Copilot as part of my everyday workflow for debugging, prototyping, and moving faster. I like figuring things out independently, exploring unfamiliar codebases, and turning ideas into real, usable products instead of just academic projects. Fast-paced startup environments and real-world problem solving are the kind of work I naturally enjoy.

TECH STACK

Front-End	React.js · JavaScript (ES6+) · HTML5 · CSS3 · Responsive UI Design
Back-End & DB	Supabase (PostgreSQL) · Firebase · REST APIs · Python · Auth Systems
Deployment	Vercel · Render · Git · GitHub · VS Code · Postman
AI Dev Tools	Cursor · Windsurf · Ollama · ChatGPT · GitHub Copilot
CS Fundamentals	Data Structures · Algorithms · Problem Solving · Codebase Navigation

PROJECTS

QR Attendance System

[GitHub](#) ↗ | [Live Frontend](#) ↗ | [Live Backend](#) ↗

React · Supabase (PostgreSQL) · JavaScript · TypeScript · Vercel · Render

- › Built and deployed a production-oriented attendance platform using QR authentication, GPS validation, and face-verification workflows — solving real proxy attendance issues for an actual user base, not a demo project.
- › Built the complete system independently — including the React frontend, Supabase (PostgreSQL) backend, admin dashboard, QR authentication flow, real-time attendance validation, and database architecture.
- › Engineered responsive, component-driven admin dashboards with real-time data synchronization and scalable front-end architecture designed for maintainability and future feature expansion.
- › Used AI-assisted development workflows with Cursor and GitHub Copilot for rapid prototyping, debugging, feature iteration, and navigating complex code faster during development.
- › Handled deployment workflows on Vercel including production builds, environment configuration, deployment management, and post-deployment testing in a real-world setup.

News2Meme — AI Content Automation

[GitHub](#) ↗

Python · LLM APIs · Workflow Automation

- › Built an end-to-end pipeline that fetches trending news and transforms it into meme-ready social content using external LLM APIs — practical LLM integration, not a chatbot wrapper.
- › Designed automated content processing, formatting, and structured output workflows with maintainable architecture and rapid-iteration mindset aligned with AI-first development.

Personal Portfolio — Live

[GitHub](#) ↗ | [Live](#) ↗

React · CSS · Vercel

- › Designed and deployed a fully responsive, mobile-first portfolio; hands-on experience with Vercel CI/CD pipelines, production deployments, and reusable React component architecture.

Student Management System

[GitHub](#) ↗

Python

- › Modular CRUD application for student record management — reinforcing core CS fundamentals: clean architecture, structured data operations, and user-friendly management flows.

EXPERIENCE

Secretary — Robotics Club, Takshashila University

2023 – Present

- › Coordinated technical workshops and cross-team robotics activities — hands-on experience managing engineering projects and collaborating with technical peers end-to-end.
- › Maintained schedules, tracked action items, and facilitated club communications across 100+ members; strong execution and follow-through in a leadership role.

Hostel Representative

2024 – Present

Takshashila University, Tamil Nadu

- › Official liaison between 200+ hostel residents and university administration — clear communication, stakeholder management, and timely follow-through on issue resolution.
- › Coordinated maintenance and grievance resolution by tracking issues across departments and ensuring completion — demonstrated ownership, follow-up discipline, and accountability.

EDUCATION

› B.Tech – Computer Science Engineering (AI & ML) | CGPA: 7.42

› Takshashila University, Tamil Nadu

| 2023 – 2027

› Class XII – AP BIE | 707 Marks

› Narayana Olympiad Jr college, Andhra Pradesh

| 2021 – 2023

› Class X – AP SSC | CGPA: 10.0

| 2020 – 2021

CERTIFICATIONS

- › Sigma 6.0 — Full Stack Web Development + Java DSA (Ongoing) — Apna College
- › Python Programming — [University of Michigan \(Coursera\)](#)
- › Introduction to C Programming — [Learntube](#)
- › Introduction to Artificial Intelligence — [IBM](#)
- › AI & ML Virtual Internship — [Google](#)
- › AI & ML Intern — [Internpe](#)

ACHIEVEMENTS

- › Built and deployed multiple independent full-stack projects using AI-assisted development workflows — shipped to production, not just committed to GitHub.
- › Won multiple inter-college debate competitions — demonstrated structured thinking, rapid argumentation, and persuasive communication under pressure; skills that translate to clear technical communication in engineering teams.
- › Organized and coordinated Takshak 2025 Cultural Fest: managed cross-team logistics, parallel event tracks, and real-time problem-solving for one of the university's largest annual events.
- › Consistently elected to leadership roles (Club Secretary, Hostel Representative) across two consecutive years — reflecting trust, reliability, and demonstrated execution ability among peers and faculty.

CURRENTLY BUILDING

- › Strengthening backend development skills with Node.js and Express.js while building real-world full-stack applications beyond just frontend interfaces.
- › Actively learning Java + DSA through Apna College Sigma 6.0 to improve problem-solving and core computer science fundamentals.
- › Building a hostel outpass requisition system focused on streamlining approvals, request tracking, and student-management workflows.
- › Expanding deployment and infrastructure experience with platforms like Railway and exploring AWS fundamentals alongside Vercel and Render.
- › Exploring TypeScript, Next.js, and open-source contributions to better understand production-grade application architecture and scalable development practices.
